

Discussion

1. What are the results of our study?

2. Were the outcomes (un)expected?

3. How do our findings relate to what we already know? (Reference to previous research)

4. How can we explain our findings?

5. What are limitations / strengths? (-> How strong is our claim?)

6. What is our claim? (A generalization arising from the results: contribution to research)

7. What are implications? (Relevance; who benefits)

8. What are our recommendations? (Suggestions for future research)
